GENERAL DESCRIPTION

This double-sided stand-alone door lock provides controlled entry and exit at locations such as airport security areas and police stations. The PDL5300 features an HID compatible ProxCard® reader, and both the DL5300 and PDL5300 feature a real-time clock/calendar that automatically adjusts for Daylight Saving Time and allows for automated programming of events.

Double-Sided Description

Both sides of the lock contain keypads, keyholes, levers and proximity readers. To differentiate between the two sides of the lock, these instructions refer to the "primary" side and the "secondary" side. The primary side contains the ribbon cable; inserting the metal key into its lock cylinder will always unlock the latch, allowing entry or exit. The secondary side contains no wires; inserting the metal key into its lock cylinder will NEVER unlock the latch. The key inserted into the secondary side ONLY allows removal / installation of the secondary side lever.

Note: Even if the secondary side screws were tampered with and removed—and the secondary side lever removed—the lock is specifically designed to not be mechanically unlocked from the secondary side.

Important: Because the metal key will not unlock the latch from the secondary side, we highly recommend that this lock never be installed into the sole exit door of a room. You must thoroughly consider all situations (such as panic exit due to fire) before deciding where this lock is to be installed and which side of the lock will be installed on which side of the door.

DOOR PREPARATION

1. Fold and place template on high edge of door at the recommended height from floor. See Fig. 1.
2. Mark hole centers on door and door edge.
3. Drill 3/8" thru-bolt holes first, then drill 2 1/8" hole.

For Hardwood Doors:
Notch on both sides of 2 1/8" hole to accommodate mounting plate tabs.

MAIN PROCEDURES

GENERAL DESCRIPTION .............................................. 1
DOOR PREPARATION ................................................... 1
INSTALLATION JIG ...................................................... 2
LATCH INSTALLATION ............................................... 2

REMOVING THE IC CORE & LEVER ............................ 6
PROGRAMMING ....................................................... 6
TROUBLESHOOTING ............................................... 6
WIRE CONNECTIONS ................................................... 7
NAPCO LIMITED WARRANTY ....................................... 8
For Hollow Metal Doors:
Requires horizontal and vertical lock and latch case support (provided by door manufacturer).
**IMPORTANT**: Be sure to remove all metal burrs from connector cable hole—sharp edges will eventually wear away wire insulation.
4. Drill all remaining holes in template as required.

**INSTALLATION JIG**

1. If 2 1/8" hole already exists, use optional Alarm Lock Installation Jig to ensure accurate locating and drilling of 3/8" and 5/16" thru-bolt holes.
2. For best results, align the Installation Jig to door with a square and clamp to door before drilling. See Fig. 2.

**LATCH INSTALLATION**

1. Drill 1" diameter hole for latch.
2. Mortise for latch front. Insert latch and fasten with two screws supplied.
**Note**: It is important that both 1" and 2 1/8" holes be on the same horizontal center line.

**STRIKE INSTALLATION**

1. Align strike with latch.
2. Trace strike outline on door jamb.
3. Mortise jamb and install dust box and strike.

**LOCK PREPARATION**
From the factory, the primary and secondary sides of the lock are attached together. Separate the secondary from the primary side as follows:
1. Insert the metal key into the secondary side lock cylinder. Turn the key 45° (either direction).
2. See Fig. 5 and 6. Insert the lever release pin through the oval hole located in the secondary side housing and through the small round hole in the lever. While depressing the lever catch, pull off lever. See Fig. 6 for an image of the lever catch.
3. Depressing this lever catch also allows the secondary side to be separated from the primary side. Use a small screwdriver to depress the lever catch and pull the secondary lock housing away from the primary side housing. See Fig. 6.
ADJUSTING FOR DOOR THICKNESS
Plastic spacers either add or subtract the distance between the roses. Each spacer represents 1/8" of door thickness. Locks are factory assembled for 1 3/4" thick doors using 3 plastic spacers.

For other door thicknesses:
1. Remove primary side lever by inserting the key into the primary side cylinder and turning the key 45° (either direction). Depress the lever catch and pull lever.
2. Remove primary housing and unscrew primary side rose plate.
   For 1 5/8" door, remove one plastic spacer.
   For 1 7/8" door, add one plastic spacer.
3. Screw mounting rose plate up to spacers.
4. Reassemble housing and lever.
   For other door thicknesses, consult factory.

TO REVERSE LEVER HANDING
With the secondary lever and housing off:
1. Insert key into primary side cylinder, turn key 45° (either direction) and depress lever catch. Pull lever off.
2. Use the primary side spindle to rotate the lock body 180 degrees. Be sure lever catch (shown in Fig. 6) faces the door edge. If necessary, depress the lever catch to allow the primary side spindle to rotate 180 degrees.
3. With key in cylinder untouched (still at 45°), position lever on spindle and press until lever catch engages. Remove key and test lever for proper engagement by turning and pulling. For interchangeable core (IC) models, see pages 5 and 6.

LOCK INSTALLATION
Important: Before proceeding, be sure to physically block the door to prevent its closing during the installation procedure.

INSTALL PRIMARY SIDE AND LOCK BODY
1. Insert motor wire plug through the large 2 1/8" hole and the ribbon cable through the 1" hole as shown in Fig. 9.
2. Insert primary side lock body into door and be sure to properly engage the lock body with the latch as shown in Fig. 10.
The latch yoke must engage the lock body housing and the tailpiece must engage the retractor.

**INSTALL SECONDARY SIDE LOCK BODY**

1. Place the secondary rose plate over spindle and on door. Align the two slots with the two 3/8" holes in door (the rose plate is marked with "TOP", circled in Fig. 12) and the bent tabs facing door (the bent tabs bite into wooden doors, preventing their rotation; for metal doors, drill small holes to allow the rose plate to sit flush against door). Fasten with two 8-32 x 1 1/4 Phillips pan head screws through the secondary rose, engaging the primary lock body. Do not over-tighten.

2. Position secondary mounting plate and pull the ribbon cable through the mounting plate opening—be sure not to pinch or cut the wires. Fasten secondary mounting plate with two 8-32 flat head screws and two sheet metal screws (do not over-tighten). Note: Be sure the mounting plate is perfectly vertical before installing sheet metal screws. See Fig. 13 for screw locations. Note: As you tighten the screws, the secondary mounting plate pulls in and secures the primary side lock body to the door.

**IMPORTANT:** See Fig. 11 and 13: The motor wire must come through either slot and be secured by the motor cable notch without pinching or cutting the wire.

3. Place battery pack inside secondary housing with battery plug under pack as shown. The back of the battery pack must be parallel to (flush with) the back of the lock as shown in Fig 14.

4. Plug the battery connector into the secondary side receptacle. See Fig. 15.
5. Connect the motor wire plug (see Fig. 15 for location of the motor wire receptacle), then connect the ribbon cable. **Note:** These plugs and sockets fit only one way—do not force them. Seal the connectors with dielectric grease (included). Upon connection of the ribbon cable, you will hear three beeps.

6. Place secondary housing over the spindle making sure that all wires are through the housing before tightening the two bolts. Do not allow the wires to cross or lay on top of each other. Jiggle the connector cable to be sure the wire opening does not pinch or cut wires before fastening bolts.

7. Secure the secondary housing to the primary housing with the two 10-32 x 2 1/4" screws as shown in Fig. 16.

8. Secure the top of the secondary housing to the secondary mounting plate by inserting the two trim 4-40 flat-head Phillips head screws. See Fig. 17.

9. **ATTACHING LEVERS AND LOCKSETS**

   **Interchangeable Core (IC) Models:**
   Skip to the section, "INTERCHANGEABLE (IC) LOCKS" below.

   **Standard Levers and Cylinders:**
   Standard levers and standard lock cylinders are both included in non-IC lock models.

   a. Install the tailpiece, cylinder retainer and cylinder into the standard lever as shown in Fig. 18.

   b. Attach the primary side lever by first inserting the metal key into the primary side lock cylinder and turning the key 45° in either direction.

   c. Insert the lever on the spindle and push the lever in until it engages with the lever catch (it may be necessary to turn the key back and forth while installing the lever).

   d. Install the secondary side lever in the same manner as the primary.

   d. Test both levers to be sure they are on securely and operate without binding. Be sure the primary side key retracts the latch when the key is turned in either direction.

   **BE SURE TO TEST THE LEVERS AND CYLINDERS FOR PROPER OPERATION BEFORE CLOSING DOOR.**

   **INTERCHANGEABLE (IC) LOCKS**
   Interchangeable (IC) cores require special levers. If necessary, remove both the primary and secondary standard levers (with their standard cylinders) before proceeding. (To remove standard primary or secondary levers, insert key into cylinder, turn key 45° in either direction, depress the lever catch and pull off lever).

   Interchangeable (IC) cores and their specialized levers are both available from your Alarm Lock dealer.

   **INSTALL INTERCHANGEABLE (IC) CORES**
   1. Insert primary side IC lever on spindle and push in until it engages with the lever catch.

   2. Insert control key in primary side core and turn clockwise.

   3. Insert IC core tailpiece (shown in Fig. 19 and Fig. 20) into primary side core. **Note:** Tailpieces are used in primary side cores only. Use ONLY an Alarm Lock© IC core tailpiece.

   4. With control key in primary side core, insert core fully into lever.

   5. Turn key counterclockwise and remove control key.
6. Insert secondary side IC lever on spindle and push in until it engages with the lever catch.
7. Insert control key in secondary side core and turn clockwise. Do NOT insert tailpiece into secondary side core.
8. With control key in secondary side core, insert core fully into lock.
9. Turn key counterclockwise and remove key.

CHANGING AN EXISTING IC CORE
1. Remove the existing primary side IC core by inserting its control key, then turning the key clockwise and pulling the key to remove the core. Set core aside.
2. Insert Alarm Lock tailpiece with washer into new core.
3. Insert new control key into new core, turn clockwise.
4. Insert new core into lever and turn key counterclockwise to lock in position.
5. Remove new control key.
6. Remove the existing secondary side IC core by inserting its control key, then turning the key clockwise and pulling the key to remove the core. Set core aside.
7. Do NOT insert a tailpiece. Insert new control key into new core, turn clockwise.
8. Insert new core into lever and turn key counterclockwise to lock in position.
9. Remove new control key.

REMOVING THE IC CORE & LEVER
1. Remove the existing primary or secondary IC core by inserting the control key, then turning the key clockwise and pulling the key to remove the core.
2. Use a screwdriver to push inside of lever catch to the side (see Fig. 21). Pull off the IC lever.

PROGRAMMING
Your lock can be programmed (and re-programmed again and again) to suit your changing requirements. Instead of distributing metal keys, distribute User Codes – and delete them from the lock software (also called firmware) when needed. To program your PDL5300 lock, see WI1622. To program your DL5300, see WI1672. To program your DL5200, see OI345.

TROUBLESHOOTING
Electronic Trouble:
Locks works in reverse.
• Reverse motor wires in connector.
Lock will not accept new codes during programming.
• Disconnect battery connector, hold down any button until lock resets, then reconnect and start programing again.
Lock drains batteries quickly.
• Check all wires for pinching or cutting. Check for water damage. If condition persists, consult factory.
Lock is inoperative.
• Check batteries for proper polarity and check for cut wires.
Lock produces high pitch steady tone during lock operation.
• Low battery signal - replace batteries.

Mechanical Trouble:
Lever pulls off.
• Lever catch not fully engaged. Lock is not centered on door. Door too thick. (See Fig. 7).
Unable to assemble primary side lever.
• Key and tailpiece orientation are incorrect (See Figs. 18 - 20).
**Latch will not fully retract.**
- Lock is not properly engaged with latch or misaligned. Lock is not centered on door (See Fig. 10).

**Key binds in lock.**
- Lever catch not fully engaged. Lock is not centered on door. Check for proper tailpiece and proper orientation of tailpiece (See Figs. 18 - 20).

**WIRE CONNECTIONS**

1. Battery Wire
2. Ribbon Cable
3. Motor Wire
4. Auxiliary Power / Remote Release
   Wire colors in supplied plug are as follows:
   - **Auxiliary Power:**
     - Red: 6-9VDC
     - Black: Ground
   - **Remote Release:**
     - Two white wires; short to activate.

**FIG. 22: WIRE CONNECTIONS**
ALARM LOCK LIMITED WARRANTY

ALARM LOCK SYSTEMS, INC. (ALARM LOCK) warrants its products to be free from manufacturing defects in materials and workmanship for 24 months following the date of manufacture. ALARM LOCK will, within said period, at its option, repair or replace any product failing to operate correctly without charge to the original purchaser or user.

This warranty shall not apply to any equipment, or any part thereof, which has been repaired by others, improperly installed, improperly used, abused, altered, damaged, subjected to acts of God, or on which any serial numbers have been altered, defaced or removed. Seller will not be responsible for any dismantling or reinstallation charges.

THERE ARE NO WARRANTIES, EXPRESS OR IMPLIED, WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF. THERE IS NO EXPRESS OR IMPLIED WARRANTY OF MERCHANTABILITY OR A WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE. ADDITIONALLY, THIS WARRANTY IS IN LIEU OF ALL OTHER OBLIGATIONS OR LIABILITIES ON THE PART OF ALARM LOCK.

Any action for breach of warranty, including but not limited to any implied warranty of merchantability, must be brought within the six months following the end of the warranty period. IN NO CASE SHALL ALARM LOCK BE LIABLE TO ANYONE FOR ANY CONSEQUENTIAL OR INCIDENTAL DAMAGES FOR BREACH OF THIS OR ANY OTHER WARRANTY, EXPRESS OR IMPLIED, EVEN IF THE LOSS OR DAMAGE IS CAUSED BY THE SELLER'S OWN NEGLIGENCE OR FAULT.

In case of defect, contact the security professional who installed and maintains your security system. In order to exercise the warranty, the product must be returned by the security professional, shipping costs prepaid and insured to ALARM LOCK. After repair or replacement, ALARM LOCK assumes the cost of returning products under warranty. ALARM LOCK shall have no obligation under this warranty, or otherwise, if the product has been repaired by others, improperly installed, improperly used, abused, altered, damaged, subjected to accident, nuisance, flood, fire, or acts of God, or on which any serial numbers have been altered, defaced or removed. ALARM LOCK will not be responsible for any dismantling, reassembly or reinstallation charges.

This warranty contains the entire warranty. It is the sole warranty and any prior agreements or representations, whether oral or written, are either merged herein or are expressly cancelled. ALARM LOCK neither assumes, nor authorizes any other person purporting to act on its behalf to modify, to change, or to assume for it, any other warranty or liability concerning its products.

In no event shall ALARM LOCK be liable for an amount in excess of ALARM LOCK's original selling price of the product, for any loss or damage, whether direct, indirect, incidental, consequential, or otherwise arising out of any failure of the product. Seller's warranty, as hereinabove set forth, shall not be enlarged, diminished or affected by and no obligation or liability shall arise or grow out of Seller's rendering of technical advice or service in connection with Buyer's order of the goods furnished hereunder.

ALARM LOCK RECOMMENDS THAT THE ENTIRE SYSTEM BE COMPLETELY TESTED WEEKLY.

Warning: Despite frequent testing, and due to, but not limited to, any or all of the following; criminal tampering, electrical or communications disruption, it is possible for the system to fail to perform as expected. ALARM LOCK does not represent that the product/system may not be compromised or circumvented; or that the product or system will prevent any personal injury or property loss by burglary, robbery, fire or otherwise; nor that the product or system will in all cases provide adequate warning or protection. A properly installed and maintained alarm may only reduce risk of burglary, robbery, fire or otherwise but it is not insurance or a guarantee that these events will not occur. CONSEQUENTLY, SELLER SHALL HAVE NO LIABILITY FOR ANY PERSONAL INJURY, PROPERTY DAMAGE, OR OTHER LOSS BASED ON A CLAIM THE PRODUCT FAILED TO GIVE WARNING. Therefore, the installer should in turn advise the consumer to take any and all precautions for his or her safety including, but not limited to, fleeing the premises and calling police or fire department, in order to mitigate the possibilities of harm and/or damage.

ALARM LOCK is not an insurer of either the property or safety of the user's family or employees, and limits its liability for any loss or damage including incidental or consequential damages to ALARM LOCK's original selling price of the product regardless of the cause of such loss or damage.

Some states do not allow limitations on how long an implied warranty lasts or do not allow the exclusion or limitation of incidental or consequential damages, or differentiate in their treatment of limitations of liability for ordinary or gross negligence, so the above limitations or exclusions may not apply to you. This Warranty gives you specific legal rights and you may also have other rights which vary from state to state.
